2014 TREE & SHRUB INFORMATION

Conifers

- Balsam Fir** (*Abies balsamea*): Pyramidal shape, Reaches 40-75' high. Prefers well drained soil and ample moisture. Desirable as a Christmas tree.
- Canadian Hemlock** (*Tsuga Canadensis*): Medium grower, up to 40'-70'. Ideal for screening; likes full sun to light shade.
- Colorado Blue Spruce** (*Picea pungens*): Pyramidal shape, slow to medium growth rate, reaches 50-75' high. Full sun; drought tolerant.
- Douglas Fir** (*Pseudotsuga menziesii*): Pyramidal in shape, medium growth rate, and reaches 50-100' high. Full sun to partial shade and tolerates various soils. Sensitive to drought conditions; requires good drainage.
- Fraser Fir** (*Abies fraseri*): Pyramidal in shape, medium growth rate, reaches 40-60' high. Prefers moist to damp but well drained soils. Full sun to partial shade. Short dark-green needles with silver undersides.
- White Cedar** (*Thuja occidentalis*): Also known as the American Arborvitae is slow to medium growing, pyramidal in shape and reaches 60' high. Full sun and tolerates various soils. Drought tolerant, but also does well in wet soils.
- White Pine** (*Pinus strobus*): The largest conifer, can reach 225' high, the only five-needled pine to grow east of the Rocky Mountains.

Deciduous

- American Beauty Berry** (*Calacarpa Americana*): A fast growing native perennial, up to 8' tall shrub; small flower clusters of blue, violet, pink or white in late spring, purple-blue berries early fall. It has a wide pH range and is adapted to moist, loam, sandy or shallow upland sites.
- American Cranberry** (*Viburnum trilobum*): Attract birds with this 8-12' shrub. Bright red fruit September through February, used for making jelly.
- Black Cherry** (*Prunus serotina*): The largest and most valuable of the cherry trees in New York State, the Black Cherry has profuse white flowers in the spring and brilliant gold leaf color in the fall. Fruit is food for wildlife and is used for making wine and jelly.
- Butterfly Bush** (*Buddleia davidii*): 5-12' multi-stemmed shrub. This bush will have fragrant flowers July through the fall. It should be heavily pruned in the spring and it tolerates most soils.
- Crabapple** (*Malus sargentii*): 6-8' high tree which is densely branched. Sargent Crabapple will have fragrant white flowers with red buds. The fruit is edible to both humans and birds. This tree prefers well-drained soils.
- Native Birch** (*Betula papyrifera*): Growth height of 50', slender tree, native birch has white bark after 3 to 4 years. Grows well in moist soils.
- Red Oak** (*Quercus rubra*): 60-70' symmetrical tree, the Red Oak is a great timber tree. It can tolerate full sun and polluted environments. It prefers sandy soils.
- Sugar Maple** (*Acer saccharum*): Rounded shape, slow to medium growth rate, reaching 60-70' high. Does well in full sun and well drained soils.
- Tulip Tree** (*Linodendron tulipifera*): 80 to 100 feet tall and maintains a fairly narrow oval crown. Fragrant flowers attract small wildlife. The Tulip Poplar is highly resistant to disease and insects, making this a healthy tree that will provide a lifetime of enjoyment.
- White Flowering Dogwood** (*Cornus florida*): Low branching tree that spreads horizontally and has a semi-rounded top. Sun to part shade and in well-drained acid soil. Mulch to maintain a cool, moist soil. Needs summer water. One of the showiest native trees!

Conservation Pacs * Native or Naturalized

Fern: 2 each of Christmas, Cinnamon, *Maidenhair, *New York, Ostrich.

Songbird: 2 each of *Sgt. Crabapple, *Staghorn Sumac, *Elderberry, *Chokeberry, *Arrowwood

Wildflower: 2 each of *Black-eyed Susan-s, *Oxeye Daisy-s, *Bluebells-s, Wild Geranium-sh, *Red Trillium-sh. (Grows best in sun=s, Shade=sh)

Fruit

- Blackberry** (*Rubus darrow*): This plant produces large black fruit that is firm, fleshy, and sweet. Blackberry will produce over a long period of time. It is a very hardy and heavy producer. The root systems of this plant have great soil holding capacity.
- Blueberry-** Jersey early and mid July (*Vaccinium*): A vigorous erect bush with medium size, firm, sweet berry. Hardy and drought resistant.
- Red Raspberry** (*Rubus latham*): 3-5' Dark Green Foliage on an upright bush, producing bright berries. Bloom time late spring, fruit begins to ripen in midsummer. Full sun required.
- Honeycrisp** (*Malus domestica*): Exceptionally crisp and juicy apple, the Honeycrisp was produced from a cross of Macoun and Honeygold. Harvest mid-September to mid-October, with an excellent storage characteristic. Performs best in full sunlight.
- Jona Mac** (*Malus domestica*): Attractive, high quality McIntosh-type dessert apple, medium size, dark red color. The fruit is firm and crisp, the tree is medium sized, very productive and an annual bearer. It blooms early in the season and can pollinate all other early blooming apple varieties as well as varieties with mid-season bloom times. This plant is attractive to bees, butterflies and birds.
- Golden Russet Pear** (*Pyrus commnis*): This hardy pear tree is highly productive. It is best when planted in full sun and can grow 8-12' high. It will bloom in early spring and produce ripe pears in late summer, early fall. Bosc pears have a more firm and dense flesh than other pear varieties. This is a fast growing tree and needs a pollinizer to produce fruit.

What to know:

- Trees are bare-root stock and sold for conservation purposes only. Sizes subject to change based on availability from nursery.
- Transplants are seedlings that have been removed from their original seedbed and transplanted to a new bed. Transplants have a more mature root system, ensuring better survival
- The District is not responsible for the success or failure of your plantings. No refunds will be given for orders not picked up.
- Questions? Call us at 315-457-0325 or email us at info@ocswcd.org

All orders must be picked up on **Thursday, April 17th at the Salt Museum, at the Onondaga Lake Park, Liverpool**
8:30 a.m. to 6:00 p.m.
